Introduction

A quick orientation to what this dashboard is, why it exists, and who it's built for — everything you need before opening it for the first time.

What This Dashboard Is

The HPO Cost Efficiency Analytics Dashboard brings every cost-efficiency and operational excellence initiative across the manufacturing organisation into a single, structured view. It tracks each idea from submission through implementation, and translates plant and departmental activity into the financial and operational insight leadership needs to make confident decisions.

The Business Problem It Solves

In automotive manufacturing, cost-saving ideas span procurement, production, quality, supply chain and other functions, and are often scattered across spreadsheets and status updates. This dashboard consolidates that information, standardises how initiatives are scored and prioritised, and gives every stakeholder — from initiative owners to the board — a shared, real-time source of truth on cost efficiency performance.

WHO SHOULD USE IT

Finance & Leadership

CFOs, FP&A and the executive board use it to monitor savings performance and guide investment decisions.

HPO Team

Initiative owners and coordinators use it day-to-day to track progress, ownership and workload.

Business Analysts

Analysts use it to evaluate initiatives, benchmark performance and support recommendations.

Dashboard Overview

A single Power BI solution spanning five pages, built for automotive manufacturing cost efficiency and operational excellence — each page serving a specific audience and decision, from executive monitoring to day-to-day initiative tracking.

PURPOSE

To give every stakeholder a clear, consistent view of cost-efficiency and operational excellence initiatives across the manufacturing organisation — their financial impact, progress and priority — so decisions are made on shared, up-to-date information.

TARGET AUDIENCE

CFOs and Finance leadership, the HPO initiative team, FP&A, and the executive board.

KEY BUSINESS OBJECTIVES

- Track cost-efficiency savings potential across the full manufacturing initiative pipeline
- Monitor operational excellence progress from idea to implementation
- Support prioritisation and investment decisions across plants and departments
- Provide forecast visibility for financial planning

OVERALL STRUCTURE

Five connected pages — Executive Summary, Initiative Tracker, Financial Impact & Forecast, Board Review and Executive Recommendation — each answering a different set of business questions while drawing on the same underlying initiative data.

Getting Started

A few basics to get comfortable navigating the dashboard — no technical knowledge required.

1

Opening the Dashboard

Open the file in Power BI Desktop, or view it through Power BI Service if it has been published to your workspace. It opens on the Executive Summary page by default.

2

Moving Between Pages

Use the page tabs to move between the five dashboard pages. Each page is self-contained and focuses on a specific audience and set of questions.

3

Using Filters & Slicers

Dropdown filters at the top of each page — such as Department, Category, Status or Owner — let you narrow the view. Selections apply instantly across that page.

4

Interacting with Visuals

Click any chart element to highlight related data across the page. Hover over a visual to see exact values in a tooltip. Click the selection again to clear it.

A Simple Rule of Thumb

Start broad on the Executive Summary page, then use filters and the other pages to narrow into the department, category or initiative you're interested in.

For CFO & Finance Leadership

Executive Summary

The starting point of the dashboard. It gives leadership a complete, at-a-glance picture of cost-efficiency savings performance across the entire manufacturing initiative portfolio.

WHAT YOU'LL FIND

- Headline KPI cards — pipeline savings, net savings, implementation cost and implemented rate
- Savings breakdown by department and initiative category
- Status distribution across all initiatives
- Quarterly savings forecast trend

QUESTIONS THIS PAGE ANSWERS

- What is the total savings pipeline right now?
- Which departments and categories drive the most value?
- How much of the pipeline has already been implemented?

For the HPO Team

Initiative Tracker

An operational view built for day-to-day monitoring — designed to help the team see exactly where every initiative stands and who owns it.

WHAT YOU'LL FIND

- Initiative counts by status — idea, in progress, implemented and more
- Workload breakdown by owner and by department
- A detailed, filterable initiative table with savings and payback figures

QUESTIONS THIS PAGE ANSWERS

- How many initiatives are pending versus completed?
- Which owners or departments carry the heaviest workload?
- What are the specific details behind any single initiative?

Ideas by Status

Status	Count
Idea	10
Under Review	10
In Progress	10
Implemented	8
Approved	7

Ideas by Owner

Owner	Count
V. Rao	4
K. Subramaniam	3
M. D'Souza	3
R. Chandran	3
A. Iyer	2
G. Bose	2
S. Menon	2
P. Krishnan	1
S. Kapoor	1
Sundhar N.	1

Ideas by Department

Department	Count
Facilities	5
Aftersales	4
EV Program...	4
HR	4
IT	4
Procurement	4
Quality	4
Supply Chain	4
Digital & IT	2
Finance - Sha...	2

For FP&A

Financial Impact & Forecast

A financial planning view that connects current savings performance to what lies ahead — built to support forecasting and budgeting conversations.

WHAT YOU'LL FIND

- Net savings broken down by initiative category
- Projected savings across upcoming forecast quarters
- Pipeline savings compared against implementation cost, by department

QUESTIONS THIS PAGE ANSWERS

- How are savings expected to evolve over coming quarters?
- Which categories contribute the most net savings?
- How does investment compare to expected return, by department?

For CEO & Board

Board Review

A focused, high-level view built for board-level reporting — surfacing the initiatives that matter most, ranked by savings, cost and speed of return.

WHAT YOU'LL FIND

- Headline records — highest savings, cost, priority score and fastest payback
- Top 10 initiatives by annual savings
- Top 10 initiatives by implementation cost
- Top 10 fastest-payback initiatives

QUESTIONS THIS PAGE ANSWERS

- Which initiatives deliver the greatest savings?
- Which require the largest investment?
- Which initiatives return value the fastest?

For Executive Decision-Making

Executive Recommendation

Turns analysis into action. Every initiative is matched with a recommended next step, based on its financial impact, strategic alignment and payback period.

WHAT YOU'LL FIND

- Counts of initiatives by recommended action — approve, review, continue and more
- A prioritised table combining savings, cost, alignment and investment scores
- A clear, recommended action for every initiative

QUESTIONS THIS PAGE ANSWERS

- Which initiatives should be approved immediately?
- Which need further review before a decision is made?
- Where should leadership focus attention first?

Tips for Using the Dashboard

A few habits that will help you get more accurate, more useful insight every time you open it.

Filter Before Comparing

Apply the relevant Department, Category or Status filter before comparing KPIs — this keeps comparisons fair and avoids mixing unrelated initiatives.

Review Multiple Pages

Each page tells part of the story. Cross-check a finding on the Executive Summary against the Board Review or Financial Impact pages before drawing conclusions.

Hover for Detail

Hovering over any chart or card reveals a tooltip with exact figures — useful when you need a precise number rather than a visual estimate.

Reset If Something Looks Off

If a page appears empty or incomplete, an active filter is usually the cause. Clear the filter selections to restore the full view.

Frequently Asked Questions

Q. Why do KPI values change after I apply a filter?

KPIs recalculate to reflect only the initiatives that match your current filter selection. This is expected — it lets you see performance for a specific department, category or status.

Q. Why are some visuals showing as blank?

A blank visual usually means the current filter combination has no matching initiatives. Try clearing one filter at a time to see which selection is causing it.

Q. How do I reset the dashboard to its default view?

Set each dropdown filter back to "All", or refresh the page. This clears any active selections and restores the full, unfiltered view.

Q. Who should I contact if I have questions?

Reach out to the HPO project team for questions on initiative data, or the dashboard owner for anything related to navigating or using the report itself.

✓ Conclusion

"

A dashboard is only as valuable as the decisions it informs. Used consistently, this one turns scattered initiative data into a shared, confident view of where savings come from — and where to focus next.

The HPO Cost Efficiency Analytics Dashboard is designed to support decision-making at every level — from day-to-day tracking by the HPO team to strategic prioritisation by the executive board. By bringing savings, cost and progress data into one consistent view, it removes the guesswork from evaluating and prioritising cost-efficiency initiatives.

Reviewing it regularly, rather than only when a decision is due, helps surface trends early and keeps every stakeholder aligned on the same numbers. Used consistently, it becomes less of a reporting tool and more of a shared decision-making habit.

This guide is intended to complement — not replace — the project's other documentation. For details on the data model, methodology and development history, refer to the accompanying Master Plan, Decision Log and Project Journal.
